

IntelliRinse

Proprietary technology, designed for Concordia Ascent Touch

Clarity in every cup

A well-maintained, clean machine is not just for looks - a clean machine means a quality cup of coffee every single time! Oil from coffee can build up over time, and this causes burnt, stale flavors in the cup. Dirty, unmaintained equipment also raises the risk of causing long-term damage to the machine. When well-maintained, automated coffee brewers can perform for upwards of 500,000 drinks served throughout their life.

Save time, supplies, and guests

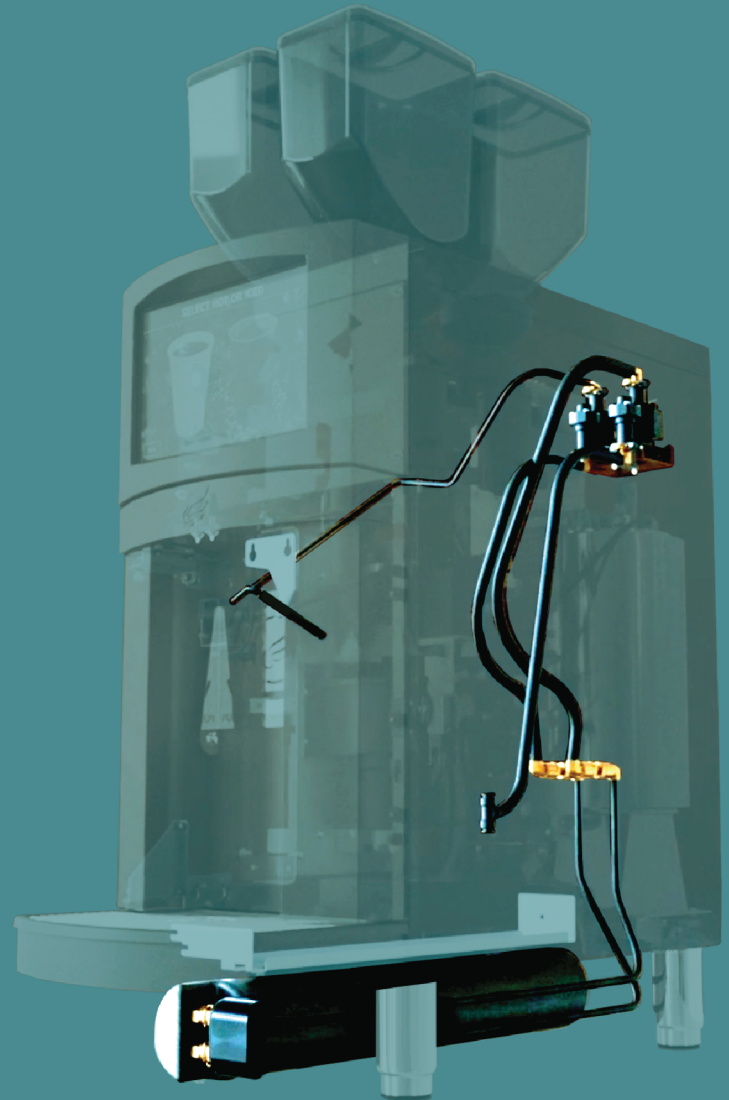

Taking care of your machine means taking care of your guests! That's over 10 million milligrams of caffeine, all thanks to you! IntelliRinse knows when to use cleaner for a full cleaning cycle and when to do a simple rinse to keep maintaining drink service. Cleaning a coffee machine effectively has never been this easy, even with multiple units! No more tablets. No more dirty taste!

Onboard and precise

With IntelliRinse Clean-In-Place, our engineers have formulated a cleaning agent that directly targets coffee oils in the brewing chamber, and paired it with an integrated system powered by industrial CFV Newton precision valves. From start to finish, cleaning takes less than 10 minutes total! The on-board canisters hold 55 cleaning cycles for reliable and precise cleaning (1 cycle per every 250 drinks). Under counter mounting for cartridges available upon request.

Automated to match your rhythm

Your coffee program should work for you! Compared to previous cleaning methods, IntelliRinse saves \$700 in cleaning supplies and 52 labor hours every year. With fewer touchpoints and less to worry about, let your staff focus on hospitality and connection. With quick disconnects towards the front of the unit, changing the cartridge is easy and accessible.

With IntelliRinse, what do you still need to clean?

Paired with our new system, your staff can simply pay attention to key areas during operation: keeping the dispense area clean and emptying the grounds bin of used coffee. Order your AT with a pass-through chute for even more hands-off operation!
