

Simple for your operation, smart for your business

OUR SUITE OF SANITATION SOLUTIONS

Luminice® II

The only internal, fully integrated, automatic UV gas air solution available in the market today. 254 nm and 185 nm UV light combine to sterilize air and create photo plasma gas, inhibiting bacteria growth.

iAucs®

Lime scale is the enemy of clear ice and optimal machine performance. iAucs automatically de-scales your ice machine so you have more time to focus on your business and your customers are served the clear ice they crave.

Manitowoc De-Scaler/Cleaner and Sanitizer

Biofilm is even less appealing than it sounds. Bacteria, algae, fungi, mold, and worst of all, viruses will find themselves at home in your ice machine without proper cleaning and sanitation. When used as directed, Manitowoc Cleaner and Sanitizer are formulated to perform at the highest level while protecting your ice machine.

Arctic Pure®

This two-stage system first pre-filters to remove sediments like sand, rust and dirt. In stage two, the water filter traps microorganisms, polymers, chlorine and minerals. The result is less scale buildup and better-tasting ice. When integrated with Indigo® NXT, the system automatically provides alerts when filters require changing.

D-Bin Scoops

Contamination is most often caused at the point of contact, where the scoop meets the ice. D-Bin scoops have thumb and knuckle guards to prevent unintentional ice touching. With NSF-approved scoops, compliance with local health codes is ensured.
